

DISCOVER ZEN3

YOUR ENTERPRISE TECHNOLOGY PARTNER

INDUSTRY-LEADING TECHNOLOGIES | PROVEN BEST PRACTICES | GLOBAL REACH

THE ZEN3 ADVANTAGE

Zen3 works with some of the biggest names in tech because we have a proven ability to support large projects involving complex, cutting-edge technologies - all while using the best practices necessary to ensure that our work stays tightly aligned with client goals.

With over 1300 professionals distributed across our 3 global delivery centers, we have the ability to scale to support even the most ambitious technology initiatives. Our clients gain access to our extensive talent sourcing capabilities, deep knowledge base, expansive roster of experts and our absolute dedication to delivering elite quality business technology solutions.

Powerful Technology - Pain Free

Our solutions deliver vital competitive advantages while avoiding costly developmental pain-points.

Efficient by Design

From cloud to AI-driven automation, our solutions are tightly tied to tangible business value and efficiencies across the organizations.

Driving New Opportunities

Our tools don't just facilitate greater efficiency for current operations. They open up new markets, new services and products.

Enterprise Cloud

From facilitating organization-wide migrations to the cloud, to easing the burden on internal cloud administrators, Zen3 is here to help.

Smart Data Pipeline

Zen3 specializes in providing the unique toolset and highly trained personnel, needed to ingest, curate and analyze large datasets.

AI/Machine Learning

Zen3 has seen the power of these new innovative technologies up close, and can help your enterprise unlock their transformative potential.

A LADDER TO THE ENTERPRISE CLOUD

Most companies understand the immense potential benefits of the cloud: CAPEX/OPEX savings, unmatched scalability, and a superior development environment. But getting there can be a considerable management challenge requiring specialized expertise in cloud infrastructure, applications, and vendor selection.

A full-fledged tool-driven cloud services company, Zen3 specializes in delivering simpler, safer, and faster cloud migrations at scale with minimal disruption to workloads. Our end-to-end cloud solution portfolio includes consulting, assessment, migration support, and database operations management.

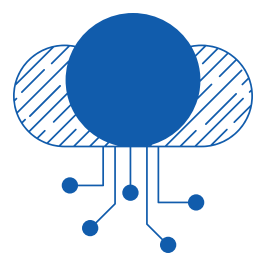

Cloud Advisory

Get expert advice and guidance at every stage of your cloud journey.

Cloud Migration

Move business legacy applications and essential services to the cloud at scale.

Cloud Ops

Employ industry-leading cloud Solutions. Shift from cloud administration to innovation.

Cloud DevOps

Build fully tested applications at the speed of business and out-innovate the competition.

DATA SERVICES: MACHINE POWER WITH HUMAN INSIGHT

Building enterprise-grade data is a sprawling technology management challenge—from selecting the right data sources, to ensuring its accuracy, and preparing it for use with machine learning models. Zen3 has experience in curating massive existing datasets and creating and collecting original data to support new projects. We employ human-led machine-assisted data processing to ensure accurate analysis alongside, efficiency and accuracy.

DATAMIME, our annotation and workflow tool for data projects, is designed to collect and annotate a variety of speech formats in over 20 languages. It can simulate domain and locale-specific conversations as well.

DATAMIME is powered by our exceptional team of linguists, annotators and expert analysts. We also have our proprietary automated speech recognition and NLP engine for multiple languages and accents.

UNLOCK THE POWER OF AI

Artificial Intelligence has rapidly transitioned from science fiction to business reality. From initial trial projects, to industry-shaking innovations, we can help your enterprise keep pace with this transformative new technology cluster.

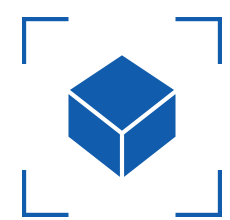

Assisted Intelligence with Human Intervention

Build AI systems that equip executives with actionable intelligence in real-time.

Automation without Human Intervention

Let true automation allow machines to handle routine as well as complex tasks.

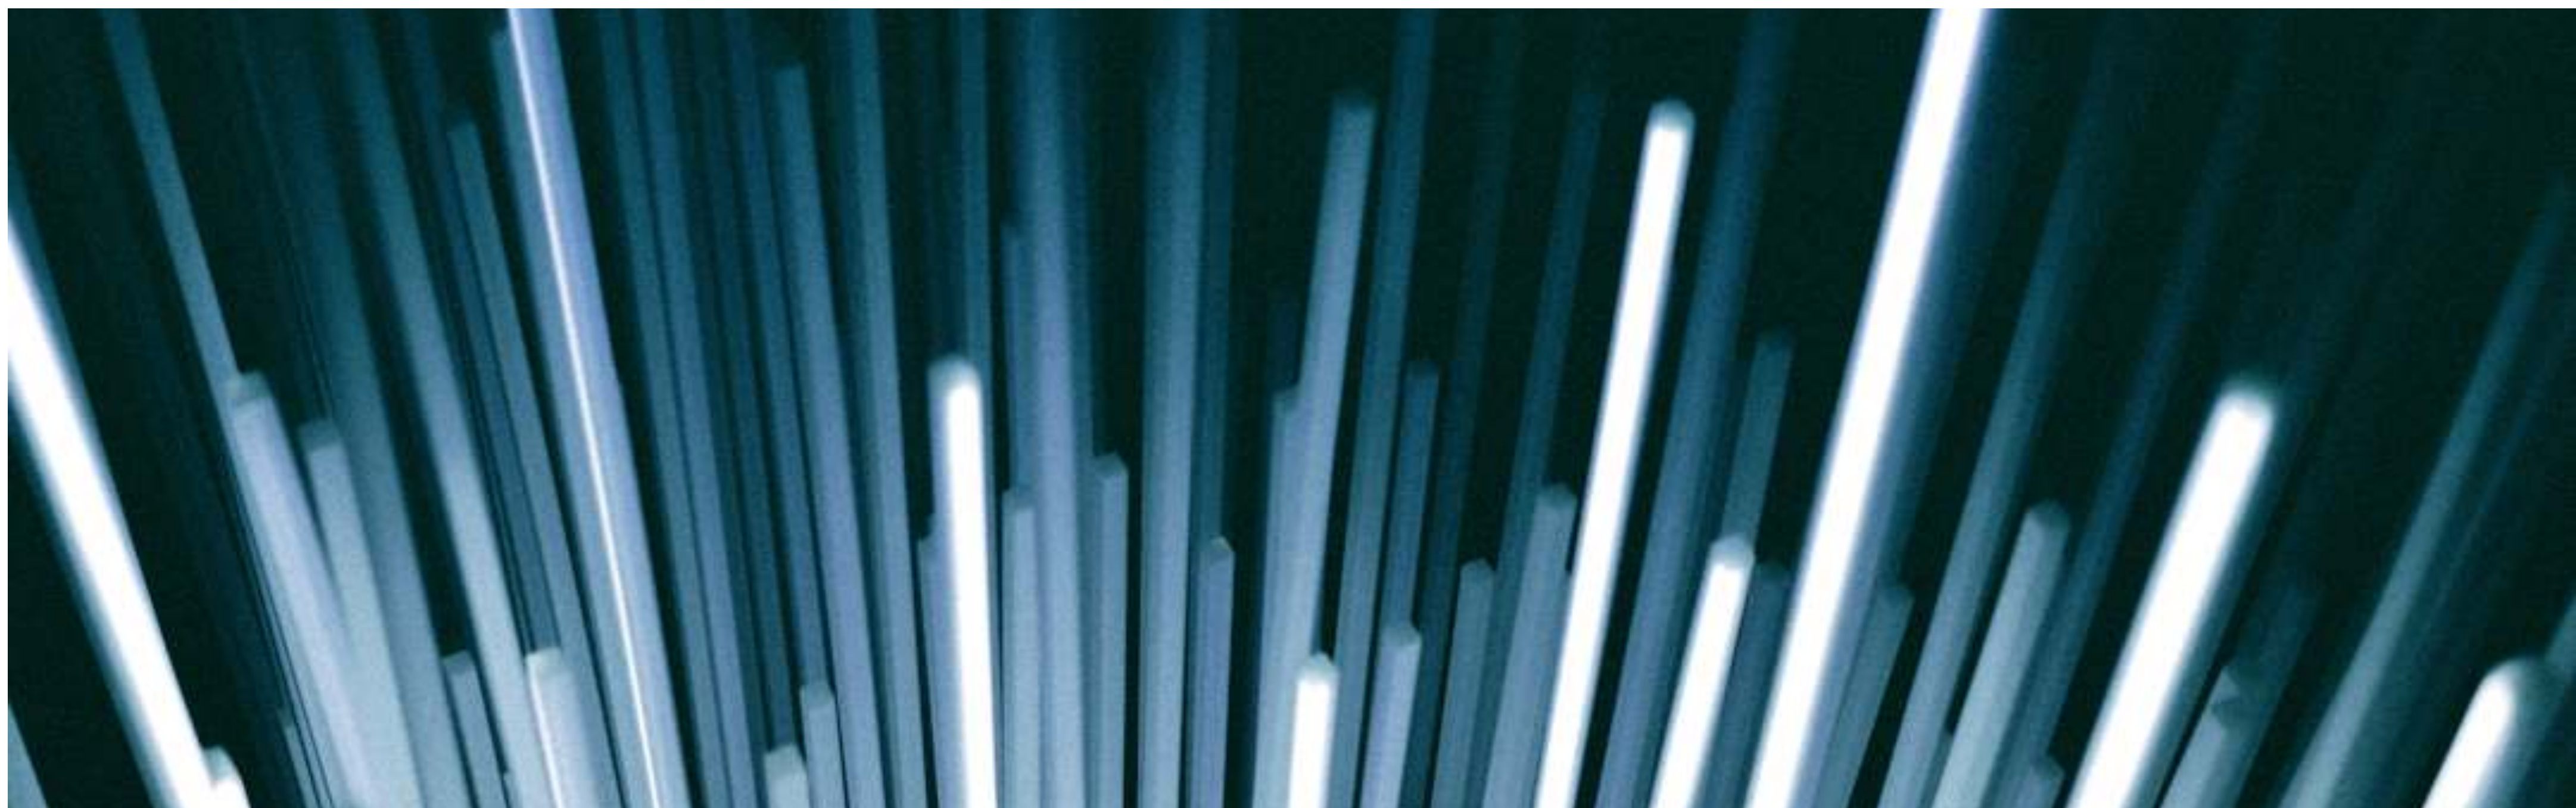

Augmented Intelligence

Use AI to augment human decision-making through continuous communication.

TAKE MACHINE LEARNING FROM HYPE TO REALITY

Machine learning tools can process volumes of data more efficiently than human analysts while making subtle judgments that were previously inaccessible to machines.

At Zen3, we help clients leverage our deep machine learning knowledge base in support of a wide array of ML-powered initiatives—from enterprises making their first forays into this promising new tech to globe-spanning projects for ML-research leaders.

PROTOTYPICAL MACHINE LEARNING USE CASES

Customer Segmentation

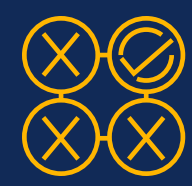

Inventory Forecasting

Image Analysis & Categorization

Image/Video Analysis

Recommendation Engine

Sales and Engagement & Funnel Analysis

Taxonomy Creation

Model Building & Training

Supply Chain Optimization

Speech Analytics

Entity Detection

Online Presence & Social Media Analysis

ROBOTIC PROCESS AUTOMATION

The virtual “bots” bring the same benefits to operations that machine learning brings to data—highly efficient automation of tasks that were previously far too multi-faceted for machines.

CHATBOT DEVELOPMENT

Chat-driven capabilities can transform the way we do business. They enable customers and professionals alike to interact with data through an unprecedentedly natural, simple, and efficient medium.

CONVERSATIONAL ANALYTICS POWERED BY SAYINT

As speech becomes an essential user interface medium, organizational speech analytic capabilities are rapidly becoming indispensable.

Zen3 provides end-to-end support for conversational analytics, powered by and delivered through our Sayint platform. Sayint's tools drive insight generation in support of core business objectives like improving customer satisfaction, evaluating sales conversations, and monitoring service interactions.

Zen3 uses these powerful capabilities to support two of the leading voice assistants globally for some of the most respected names in technology.
